

AI-Powered Smart Support Assistant for Internal Organisational Support

Using Microsoft Copilot Studio, Power Automate,
Excel Online, and Outlook V2 Email Workflows

Prototype Demonstration

Overview

- ❑ Smart Support Assistant is an internal workplace support agent that helps employees with HR, IT, Admin & Facilities, Security & Compliance, Payroll, Benefits, and Onboarding questions.
- ❑ It supports policy guidance, support ticket creation, ticket status lookup, and urgent callback escalation through Power Automate and Outlook V2 email workflows.
- ❑ The assistant uses only the approved internal knowledge base for policy responses and follows safety, privacy, compliance, and fallback guardrails.

Key Features

- ❑ AI-powered internal support assistant using Microsoft Copilot Studio
- ❑ Guided conversational workflows for employee support requests
- ❑ Internal policy assistance using a knowledge-grounded knowledge base
- ❑ Structured support ticket creation with automatic ticket ID generation
- ❑ Ticket status tracking using ticket ID or employee details
- ❑ Official company email validation and input checking

Key Features

- ❑ Outlook V2 email workflow integration for escalation notifications
- ❑ Excel Online integration for ticket storage and retrieval
- ❑ Multi-turn conversational support experience
- ❑ Feedback and rating collection workflow
- ❑ Fallback handling for unsupported or unclear queries
- ❑ Conversation-based evaluation testing with 100% quality scores across key workflows

SYSTEM WORKFLOW AND ARCHITECTURE

AI-Powered Smart Support Assistant for Internal Organisational Support

Working Demonstrations (screenshots) are in the following slides:

Note: Employees can directly choose support ticket creation, ticket status lookup, or human escalation workflows from the beginning as needed.

However, the demonstration scenarios assume employees first attempt self-service support through knowledge-grounded conversational assistance before progressing to support ticket or escalation workflows if additional help is required.

Personalised Greeting to Support Options flow

The assistant personalises the interaction by optionally collecting a preferred name before routing employees to policy questions, ticket creation, ticket status lookup, or human escalation workflows.

Demonstration - 1

Internal Policy Question Workflow

The employee asks an internal payroll policy question through the conversational support assistant. After receiving a grounded response from the approved knowledge base, the employee asks another question related to their individual payroll update status, which the assistant cannot access. The assistant then offers support ticket creation, validates employee input details, generates a ticket ID, validates ticket ID formats during status lookup, and allows the employee to check ticket status before ending the conversation.

Hello, I'm Smart Support Assistant.

Greeting and Policy Question Flow (Question Selection)

The employee selects the relevant support category and submits a payroll policy question through the assistant.

Payroll Support

Team member, what would you like to know about Payroll Support?

4 minutes ago

How do I update my direct deposit information for payroll?

Let me check the approved internal knowledge base.

To update your direct deposit (bank) information for payroll, you need to keep your bank details up to date in the HR portal. Make sure to submit any changes before the payroll cut-off date to avoid payment delays. If you notice incorrect bank details on your payslip or cannot update your information, you should contact Payroll support for assistance. Do not send bank information through unsecured channels [1](#) [2](#).

Knowledge-Base Answer Found

The assistant retrieves a grounded answer from the approved internal knowledge base about updating payroll bank details and asks whether the response was helpful before continuing the conversation.

Policy Question Flow (Another Question Selection)

The employee asks whether their specific bank detail update has been processed, which the assistant cannot verify from the approved knowledge base and therefore offers additional support options.

Raise a support request

I can help you Team member raise a support request. I'll just need a few details

Ruchika, what would you like to know about IT Policies & Support?

3 minutes ago

How do I reset my company account password if I'm locked out?

Let me check the approved internal knowledge base.

Policy Question Flow (Question Selection)

The employee selects an internal policy support category and submits a knowledge-based IT support question through the conversational interface.

If you are locked out of your company account due to repeated failed login attempts, you should contact IT support for assistance. Accounts may be temporarily locked after multiple failed login attempts, and IT support will help you regain access and reset your password as needed. Do not share your password with anyone, and ensure your new password meets the company's security requirements. Multi-factor authentication should be used where enabled. If you need help, raise an IT support request for prompt assistance ¹.

Human Escalation & Callback Workflow

Urgent issues can be escalated to a human support agent by capturing callback priority and contact details through a guided conversational workflow.

Feedback & Conversation Closure

The assistant supports conversation closure, user feedback collection, and satisfaction rating to assist workflow evaluation and future refinement.

Summary: Copilot Studio Evaluation Results

- ❑ The prototype was evaluated using Copilot Studio conversation-based testing across five workflows: internal policy assistance, support request creation, ticket lookup, incorrect ticket ID validation, and urgent callback escalation via email.
- ❑ All evaluated workflows achieved a 100% general quality score during prototype testing.
